Automatic
PREDICTION
of the number of aligners and cases complexity

Estimate the length and complexity of your treatment in just a few seconds

| Category:	Estimated Number of Aligners:
White	**15-25**

Justification:

Analysis and justification: Based on the intraoral photographs provided, this case appears to be a relatively straightforward aesthetic treatment focusing on the maxillary arch only.

The analysis reveals:
- Skeletal Class I relationship based on the frontal view
- Mild crowding in the maxillary arch, particularly visible in the anterior segment
- Slight rotations of some anterior teeth, but less than 15 degrees
- Normal overbite and overjet relationship
- No significant open bite issues
- Relatively flat curve of Spee

INNOVATION

ALGOSMILE
is the combination of 4 artificial intelligence systems dedicated to orthodontics
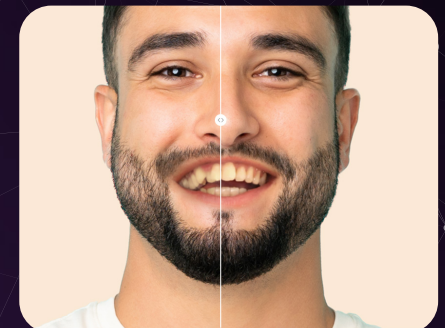

AVAILABLE IN YOUR SMILERS® SPACE

Automatic
SIMULATION
of the patient's smile

Give your patients a realistic projection of their future smile!

In 3 simple steps

1

ANSWER 4 KEY QUESTIONS about the patient's clinical situation.

2

TAKE 4 PHOTOS of the patient's teeth.

3

20 SECONDS

INSTANTLY GENERATE A SIMULATION OF THE SMILE AND AN ESTIMATION classifying the complexity of the case into three levels and indicating the **potential number of aligners required.**

AlgoSmile, a valuable decision-making tool for practitioners and patients.

FOR **PRACTITIONERS**

Improved quote acceptance rate
Give your patients the satisfaction of an informed choice.

Save time
Instant estimation for fast and efficient planning.

Controlled predictability
Anticipate your patients' needs with estimations based on objective data.

Optimised communication
Increase your patients' confidence with clear information based on accurate data.

Improved quote preparation
AlgoSmile estimations make it easier to create your quotes.

Analysis of case complexity
Helps you better understand the difficulty of cases and the duration of treatments.

FOR **PATIENTS**

A smile simulation
in just few clicks.

Instant projection
towards a new smile and a new life.

A better understanding of the treatment
thanks to a clear estimation of the number of aligners required.

Less uncertainty
about the duration and cost of treatment.

Easier decision-making
and greater acceptance of the suggested treatment plan.
